The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the rectangular base, as set forth in claim 7, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4,6,9,11,14-16,18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Fahey.

Figures 1 and 2 show structure as claimed, including a circular base portion with first and second 13 surfaces, and a back portion 11,12 extending upwardly therefrom and wrapping around the base portion more that 180 degrees. Note that the second surface 13 is generally concave with a lower central portion.

Claims 1-6,8-10,14,15 and 17-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Holland.

Figures 1-4 show structure as claimed, including a base portion with upper 34 and lower 26 surfaces, a back portion 20 extending upwardly therefrom an wrapping around the base portion, wherein the back tapers downwardly from a maximum height. The base portion includes “feet members” 30 extending between the lower surface and the floor.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7,12,13 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over either of Fahey or Holland in view of Siekman et al.

The shape of the base is considered to be a matter of design choice.

To have utilized a flowable gel-type cushion for the supports of Fahey or Holland, for additional comfort, would have been obvious to one with ordinary skill in the art, as such is shown to be conventional by Siekman et al (fig. 1). The use of attachment means between the cushion and the base to prevent inadvertent slipping thereon is also suggested by Siekman et al and would have been an obvious modification to one with ordinary skill in the art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Brosk and Rocheford show various features of the invention.
